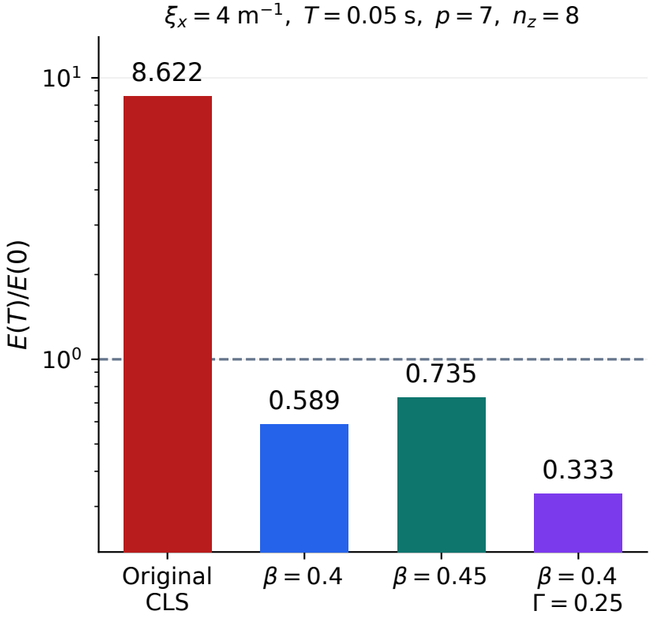
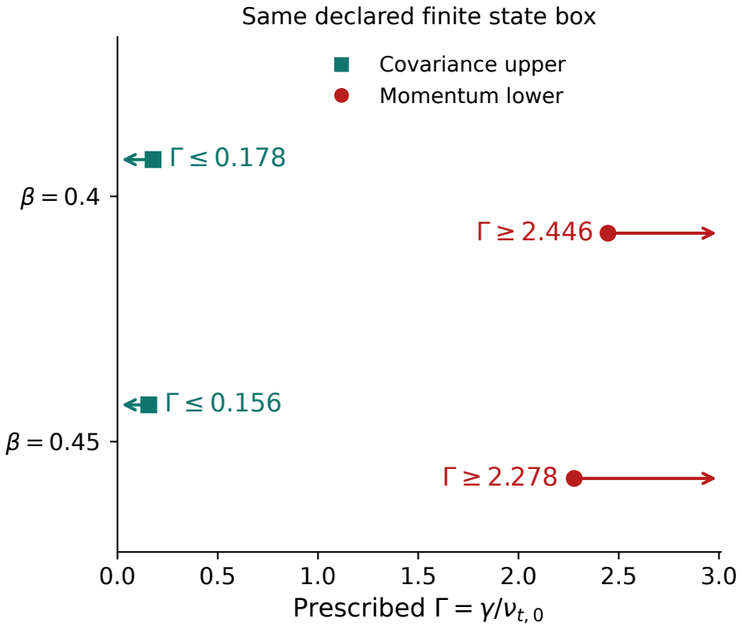
M8: local verification and failed broad qualification

(a) Reduced transverse mode



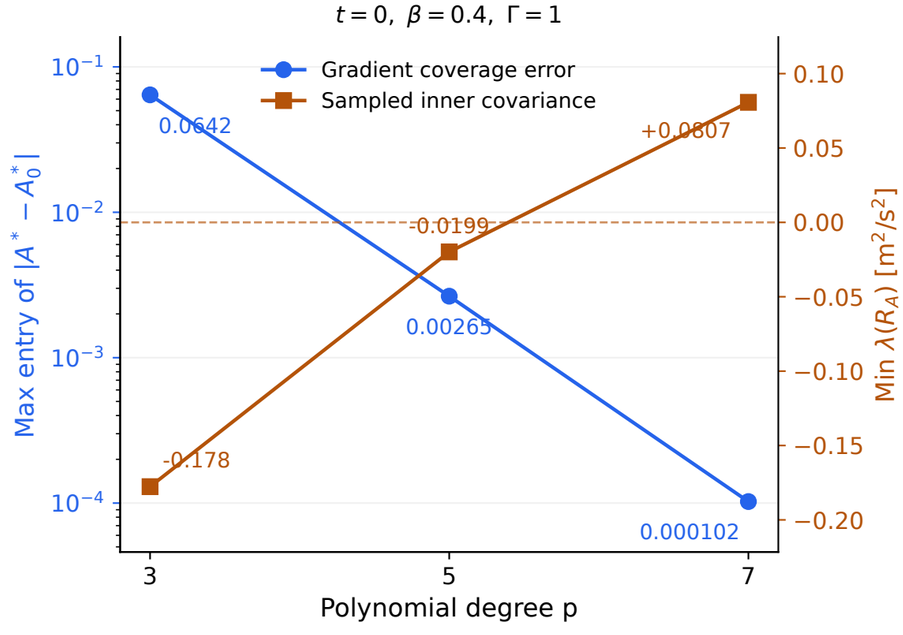
Reference-local subsystem only
IMEX2; $\Delta t = 0.00015625$ s

(b) Necessary bounds conflict



Necessary inequalities have empty intersection
No sufficient region is plotted

(c) Initial reference projection



Zero-time resolution check only
p7 finite coverage is not an evolved trajectory

No terrain accuracy claim. Local certificates and finite evaluation sets do not establish all-state or coupled stability.
